~~project Title~~

creative
**Technologist, visual
storyteller, code
artist**

...

Agenda....

• • •

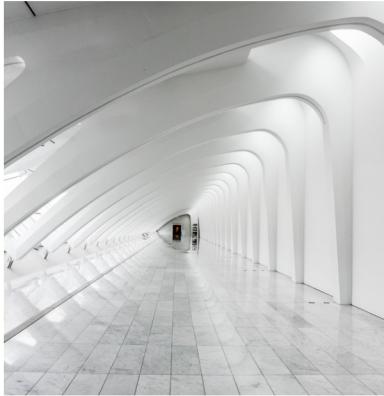

- **Problem statement.**
- **project oveerview**
- **end user**
- **tools and technologies**
- **portfolio design and layout**
- **result and screen shots.**
- **conclusion.**

~~problem statement~~

Focusing on only one skill (art, design, or coding) limits creativity and opportunities; there is a need for an integrated platform to showcase all three together.

project overview

- **The project aims to integrate art, design, and coding skills into a single digital portfolio that showcases creativity, technical ability, and innovation.**

End user....

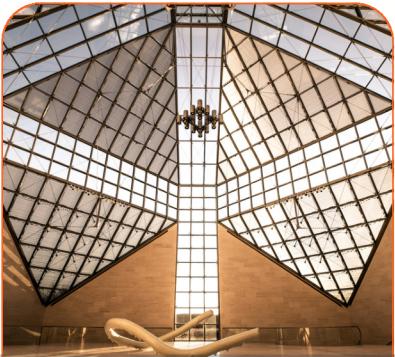

The portfolio is designed for students, recruiters, and clients who want to explore creative, design, and coding skills in one place.

It helps creative industries and companies find multi-talented individuals who can handle art, design, and coding together.

Tools and Technologies

The project uses design tools (**Photoshop, Illustrator, Figma**), coding tools (**HTML, CSS, JavaScript**), and art platforms (**Procreate, Canva**) to showcase creativity and technical skills.

portfolio design and layout

...

1. A structured layout with sections for Artworks, Design Projects, and Coding Demos, allowing users to explore skills easily.

2. A clean and responsive interface with simple navigation, visuals, and an organized showcase of creativity and technical work.

Features and functionality

The portfolio provides an interactive platform to showcase artworks, design projects, and live coding demos with easy navigation.
